REDISCOVER BOUTON® OPTICAL

Over 60 years ago, HL Bouton Co. began producing eyewear for American industrial workers with one thing in mind: give workers safety glasses that they want to wear.

Now HL Bouton Co. has been reinvented, and Bouton® Optical by PIP has elevated safety eyewear to new levels of comfort because

**YOU'VE GOT A JOB TO DO
AND BOUTON® OPTICAL
HELPS YOU DO IT SAFELY.**

Anti-Reflective REDUCE REFLECTION AND GLARE

Anti-Reflective (AR) lens coating will reduce reflection and glare, which can be particularly noticeable when working indoors, or in conditions with multiple light sources: Night driving, quality control and inspection, repair/maintenance. Users with standard lenses will likely experience eye fatigue as the work day continues, usually resulting in reduced attentiveness and productivity. Bouton Optical Anti-Reflective coating is deposited on both the front and back surfaces of the lens and allows for up to 96% of visible light transmission (VLT) to pass through the lens. When compared to the 88% to 90% VLT for a standard clear polycarbonate lens, this increased light transmission results better visual acuity for workers doing precision work.

I/O Blue ALLEVIATE DIGITAL EYE STRAIN

Bouton Optical's Indoor/Outdoor Blue Lens is a proprietary engineered lens that combines a slight yellow tint and a mirror coating, working in tandem to alleviate and help to prevent digital eye strain. The light yellow tint blocks the harsh blue light emitted from electronic screens and the slight mirror coating on the outside reduces glare from overhead lighting. With 55% VLT, it is ideal for situations where workers may be going from indoors to outdoors where it reduces the amount of time necessary for the pupil to readjust. The I/O Blue Lens will also filter out much of the harsh near UV blue light associated with tablets and other electronic screened devices.

BOUTON® OPTICAL LENS TREATMENT QUICK GUIDE FEATURED LENSES

LENS TREATMENT	VISIBLE LIGHT TRANSMISSION	DESCRIPTION	BENEFITS
ANTI-REFLECTIVE/AR	96% (clear)	Surface coating that diffuses reflection from front or back	Diffuses reflections that bounce off lens into the eye, applied on both sides - improved night driving.
INDOOR/OUTDOOR BLUE	55%	Slight yellow tint + light mirror coating	Alleviates "digital eye strain" from screens, ideal for anyone working extended periods with computer screens or electronic devices.
GRADIENT	30 - 90%	Mirror coating on top, clearer on bottom of lens	Reduces glare from powerful overhead lights, ideal for indoor lighting or outside with the sun directly overhead. All indoor/outdoor jobs.
MIRROR PLUS	10 - 18%	Mirror coating on front, AR coating on back	Darkening effect of mirror + reduction in reflections. Outdoor jobs including professional drivers.
POLARIZED	12%	Built into lens, blocks horizontally angled light	Ultimate glare reduction in water environments and in sunny conditions. Road workers, marine and air piloting.

bouton
OPTICAL

Polarized

ENHANCE VISION OUTDOORS

A polarized lens works much like a venetian blind in that it only allows light to enter at a controlled angle. Glare is caused by scattered light. It can be magnified by reflecting off flat surfaces such as water, pavement and snow. Reflected light from smooth surfaces is usually horizontally polarized and use a vertically oriented filter to block the scattered horizontal light. Coupled with the optimal tint, workers outdoors will experience reduced squinting fatigue and greatly enhanced vision.

Gradient

REDUCE OVERHEAD LIGHT GLARE

Gradient tint lenses have a slight mirror coating on the top portion of the lens. This tint reduces glare from high-powered overhead fluorescent and mercury lighting helping to minimize squinting eye strain while helping to increase productivity. Gradient tint lenses provide good protection from overhead light but fade out at the bottom half of the lens. As a result, workers are still able to see clearly when looking straight ahead or down at their work. Gradient is an ideal choice when working indoors around machinery.

Mirror Plus

PROTECT FROM BRIGHT SUNLIGHT

Adding a mirror coating to the front of a lens will “deflect” a significant amount of sunlight away from the wearers’ eyes... reducing glare 10% to 15% more than a tinted lens can alone. Using an Anti-Reflective treatment on the backside of a mirrored lens will make the lens darker by reducing the light reflecting into the eye. This combination of a mirror coating and AR provides the optimal lens technology for the bright outdoor work environment.

LENS TREATMENT	VISIBLE LIGHT TRANSMISSION	DESCRIPTION	BENEFITS
ANTI-SCRATCH (AS)	N/A	"Hardcoat" treatment toughens lens surface	Longer product life with fewer scratches.
ANTI-FOG (AF)	N/A	Surface coating that reduces fogging	Maintains clear vision. Ideal for food plants or cleaning operations with high-humidity environments.
INDOOR/OUTDOOR	40%	Light mirror coating on clear lens	Enough light transmission for use indoors, reduces pupil adjustment time. Ideal for indoor-outdoor workers.
MIRROR	10-18%	Front surface coating reflects light from lens	Less light transmission for a darkening effect, great in bright environments: snow, sand, rocks, water.

LENS COLOR	VISIBLE LIGHT TRANSMISSION	DESCRIPTION	BENEFITS
<input type="checkbox"/> CLEAR	90%	Clear polycarbonate lens	No color distortion, all polycarbonate has 99.9% UV absorption. General use.
<input checked="" type="checkbox"/> AMBER	82%	Polycarbonate made of bright amber/yellow color	Enhances visual acuity. Ideal for professional drivers in foggy, rainy or snowy conditions.
<input checked="" type="checkbox"/> LIGHT BLUE	58%	Light blue tinted polycarbonate	Relieves eye strain from bright, overhead fluorescent lighting.
<input checked="" type="checkbox"/> GRAY	12%	Gray polycarbonate lens	Darkening effect with little color distortion, best used outdoors in bright sun.
<input checked="" type="checkbox"/> BROWN	12%	Brown polycarbonate lens	Darkening effect with improved color contrast. Best used outdoors in nature - green colors enhanced.
<input checked="" type="checkbox"/> IR FILTER SHADE 3.0	10%	Dark green polycarbonate lens	Protection from welding arc and IR light. Not to be used for welding or when operating vehicles.
<input checked="" type="checkbox"/> IR FILTER SHADE 5.0	2%	Dark green polycarbonate lens	Protection from welding arc and IR light. Not to be used for welding or when operating vehicles.

SAFETY GLASSES

BOUTON® OPTICAL RIMLESS

DirectFlex

CSA MEETS ANSI Z87.1+

Special temple design features patented Directional Flex Technology

The ideal safety glasses for comfort would relieve the pressure from above the ear and better distribute the fit over a larger area behind the head. The special temple arm design on DirectFlex was designed specifically to create this greater comfort.

However, without Directional Flex Technology (DFT), increased pressure would be created behind the head, and the energy would be transferred to the lens (affecting optics). With our patented DFT technology on DirectFlex, the temple arm bends only where we want it to bend, creating extreme comfort and optimal optics.

- Lightweight, rimless design with DFT provides all-day comfort
- Thin, flexible temples provide a secure fit without uncomfortable pressure points
- Molded nose bridge designed to fit the vast majority of users
- Also meets CSA Z94.3 requirements for Canada

POLYCARBONATE AND UV

Polycarbonate lenses block 99.99% of the sun's ultraviolet (UV) rays. This UV protection is already incorporated within the lens material as lenses are being produced. Polycarbonate lenses DO NOT need any special coatings to protect you from harmful UV radiation, whether these rays are coming from sunlight or internal sources such as computer monitors and/or indoor lighting.

 **MAKING STRIDES
Against Breast Cancer®**

Breast cancer has impacted everyone in one way or another, and Eva™ provides a great venue to promote awareness.

Perhaps one more woman in the workplace will get a mammogram because she sees the pink ribbons on all of her co-worker's glasses. PIP has partnered with the American Cancer Society® and is donating a portion of all proceeds to assist in finding a cure for breast cancer. Please help PIP support this wonderful cause as we provide a VISION FOR A CAUSE!

DIRECT VENTILATION

These styles offer ventilation through multiple perforations in the frame.

INDIRECT VENTILATION

These styles feature plastic hooded vents on the top and bottom of the frame, allowing air to enter from the reverse direction while providing excellent liquid splash protection.

NON-VENTED

These styles are one solid piece with no openings for ventilation, to ensure protection from all debris.

POLYCARBONATE

PETG visors are suitable for general grinding applications. Polycarbonate visors are suitable for high heat and impact resistant situations, as well as general grinding applications

- Made with virgin resin, which leads to better uniformity of the viewing area
- Universal hole pattern will fit most headgear and hard hat adapters in the market
- Popular polycarbonate or PETG (polyethylene terephthalate glycol) materials
- Ships with masking on both sides to prevent scratching
