

MS PLUS

End Mill Series

TOUGH APPLICATIONS
REQUIRE “PLUS”
PERFORMANCE

Carbide End Mills

MS plus

General purpose end mill optimized "plus" performance.

(Al,Ti,Cr)N Multilayer Coating (MS plus)

Our original coating technology enables a multilayer of (Al,Ti)N and (Al,Cr)N. It allows machining of a wide range of workpiece materials.

Properties of (Al,Ti,Cr)N Multilayer Coating (MS plus)

	(Al,Ti,Cr)N Multilayer	(Al,Ti)N	(Al,Cr)N
Hardness (HV)	3200	2800	3100
Oxidation Temperature (°F)	2.012	1.472	2.012
Adhesion (N)	100	80	80

MS plus provides long tool life on materials up to 52 HRC.

For steels harder than 52 HRC, IMPACT MIRACLE end mills are recommended. (TOOL NEWS B075)

Cutting Performance

Carbon Steel AISI 1050

Cutting Edge Flank Wear

Notch Wear

MS plus New Line-up

Chamfer Cutter

MP3C

Chamfer cutter with excellent efficiency and great tool life with horizontal chamfering

MS plus enables machining of a wide range of workpiece materials.

Sharp Helix Flute

The optimum helix angle provides great sharpness and suppresses the occurrence of burrs. The chamfer angle is 45°

Specifications of 3-Flutes

High feed machining with an excellent balance between versatility and chip evacuation is achieved by adopting the 3-flute design. High efficiency machining is realized.

End Cutting Edge

End cutting edge can also be used for V-groove machining.

End Cutting Edge

V-groove machining

Greatly Effective for Feed Chamfering

The 3-flute geometry achieves high feed and extended tool life, and the effects of the twisted, helical flute suppress the occurrence of burrs when horizontal feed chamfering.

The leading drill series DLE, GKCD are recommended for centering.

S55C Comparison of Burrs After Chamfering

MP3C 3-helical flutes

Good finish surface

Conventional 4-straight flutes

Burrs occur

Conventional 2-straight flutes

Burrs occur

(Note 1) When cutting austenitic stainless steels, the use of water-soluble cutting fluid is especially effective.
(Note 2) If the depth of cut is smaller than this table, feed rate can be increased.
(Note 3) If the rigidity of the machine or the workpiece material installation is very low, or chattering and noise are generated, please reduce the revolution and the feed rate proportionately.

Note 1) When cutting austenitic stainless steels, the use of water-soluble cutting fluid is effective.
Note 2) If the depth of cut is shallow, the revolution and feed rate can be increased.
Note 3) When drilling, please set the feed rate at 1/3 or below the values above.
Note 4) If the rigidity of the machine or the workpiece material installation is very low, or chattering and noise are generated, reduce the revolution and feed rate proportionately.

Depth of Cut

DC : Dia

(Note 1) When cutting austenitic stainless steels, the use of water-soluble cutting fluid is especially effective.
(Note 2) If the depth of cut is smaller than this table, feed rate can be increased.
(Note 3) If the rigidity of the machine or the workpiece material installation is very low, or chattering and noise are generated, please reduce the revolution and the feed rate proportionately.

Depth of Cut												

(Note 1) α is the inclination angle of the machined surface.
(Note 2) If the depth of cut is shallow, the revolution and feed rate can be increased.
(Note 3) If the rigidity of the machine or the workpiece material installation is very low, or chattering and noise are generated, reduce the revolution and feed rate proportionately.

MP2SDB

Ball nose, Short cut length, 2 flute, High strength

^{*} Number of Flutes
(Note 1) MS plus end mills series MP2SB and MP2MB are recommended for finish surface processing.

RE = Radius of ball nose
DC = Cutting dia.
APMX = Depth of cut max.
LU = Usable length
DN = Neck dia.
LF = Functional length
DCON = Connection dia.

* Number of Flutes

* No Interference

RE = Radius of ball nose

DC = Cutting dia.

APMX = Depth of cut max.

LU = Usable length

DN = Neck dia.

LF = Functional length

DCON = Connection dia.

Depth of Cut

RE : Radius

- (Note 1) When the inclination angle of machined surface is high, or when machining at high loads; such as in corners, reduce the revolution and feed rate.
(Note 2) The use of oil mist is effective when machining with small diameter.
(Note 3) If the depth of cut is smaller than this table, feed rate can be increased.
(Note 4) If the rigidity of the machine or the workpiece material installation is very low, or chattering and noise are generated, reduce the revolution and feed rate proportionately.
(Note 5) For hardened steel over 55 HRC, use VF2XLB.
(Note 6) For cutting conditions for austenitic stainless steel and titanium alloy, use the high hardness steel (45-55 HRC) table but reduce the spindle speed by 40% and the feed rate by 55%.

MS plus Provides Superior Cost Performance

Cutting Performance

Carbon Steel AISI 1050

MS plus gives excellent wear resistance and significantly longer tool life compared to conventional products when machining carbon steel.

<Cutting Conditions>
Workpiece Material : AISI 1050 (220 HB)
Tool : 2 flute ball nose end mill R3
Revolution : 16000 min⁻¹
Cutting Speed : 930 SFM
Table Feed : 78.4 IPM
Feed per Tooth : .0024 IPT
Depth of Cut : ap .079 inch, ae .012 inch
Overhang Length : .787 inch
Cutting Mode : Air Blow
Machine : Horizontal MC (BT40)

Alloy Steel, Tool Steel AISI H13 (52 HRC)

MS plus shows higher wear resistance than conventional products when machining AISI H13(52 HRC). IMPACT MIRACLE is suitable when even longer tool life is required.

<Cutting Conditions>
Workpiece Material : AISI H13 (52 HRC)
Tool : 2 flute ball nose end mill R3
Revolution : 17000 min⁻¹
Cutting Speed : 985 SFM
Table Feed : 66.9 IPM
Feed per Tooth : .0020 IPT
Depth of Cut : ap .079 inch, ae .012 inch
Overhang Length : .787 inch
Cutting Mode : Air Blow
Machine : Horizontal MC (BT40)

Stainless Steel STAVAX (52 HRC)

MS plus shows higher wear resistance compared to conventional products when machining stainless steel.

<Cutting Conditions>
Workpiece Material : STAVAX (52 HRC)
Tool : 2 flute ball nose end mill R3
Revolution : 18000 min⁻¹
Cutting Speed : 555 SFM
Table Feed : 141.7 IPM
Feed per Tooth : .0039 IPT
Depth of Cut : ap .016 inch, ae .039 inch
Overhang Length : .787 inch
Cutting Mode : Air Blow
Machine : Horizontal MC (BT40)

Copper

MS plus shows excellent wear resistance and provides a significantly longer tool life compared to conventional products when machining copper.

<Cutting Conditions>
Workpiece Material : Copper
Tool : 2 flute ball nose end mill R3
Revolution : 15000 min⁻¹
Cutting Speed : 875 SFM
Table Feed : 59.1 IPM
Feed per Tooth : .0020 IPT
Depth of Cut : ap .079 inch, ae .008 inch
Overhang Length : .787 inch
Cutting Mode : Emulsion
Machine : Vertical MC (BT40)

For Swiss-Type Automatic Lathes
MS plus End Mill Series

MP2ES/3ES/4EC

Achieves Stable Machining without Chipping
Even when Machining Overuses the Cutting Edge

Adoption of New High-Toughness Substrate

Fracture resistance is greatly improved and stable machining is accomplished by using a high-toughness carbide substrate.

Optimized Cutting Edge Shape

The optimized rake angle suppresses burrs.

Improved Cutting Edge Machining

To improve the fracture resistance of the cutting edge, a small gash land is used for Ø6mm or greater.

Optimization of Cutting Edge and Overall Tool Length

In order to take into account the protrusion of the small Swiss-Type Automatic Lathes, the cutting edge and overall tool length have been optimized.

MS+

(Al, Ti, Cr)N Multilayer Coating (MS plus)

Suitable coating for a broad range of workpiece materials such as carbon steels and stainless steels.

Our original coating technology incorporates a multilayer of (Al, Ti)N and (Al, Cr)N. It allows machining of a wide range of workpiece materials.

Properties			
	(Al,Ti,Cr)N multilayer	(Al,Ti)N	(Al,Cr)N
Hardness (HV)	3200	2800	3100
Oxidation Temperature (F°)	2.012	1.472	2.012
Adhesion (N)	100	80	80

Cutting Performance

Machining 304 - Comparison of Fracture Resistance

The round, stainless steel bar is machined using a D-cut. The adoption of the high toughness cemented carbide and gash land provides highly improved fracture resistance.

MP3ES

After machining of 2 pieces

Conventional

After machining 1 piece
Fracture of the tip of the tool.

Selection of End Mill for Swiss-Type Lathe

① The number of Flutes must be selected according to the type of machining.

Cutting Mode		Type	MP2ES	MP3ES	MP4EC
		Flutes	2 Flute	3 Flute	4 Flute
Slotting of External			⊙	○	×
Slotting of Facing			⊙	○	×
Face Milling			△	⊙	○
Shoulder Milling			△	○	⊙

② Selecting Tools Other Than Small Swiss-Type Automatic Lathe End Mills

End Mills with an overall tool length of LF=50 mm or less can be used even with small Swiss-Type automatic lathe end mills. Select the necessary tools according to the workpiece material and machining method (such as every 0.1 or radius).

MP2SSB/MP2SB/MP2MB/MP2XLB

Greatly improved wear resistance even when machining hardened materials.

MS plus provides long tool life on materials up to 52 HRC.

For steels harder than 52 HRC, IMPACT MIRACLE end mills are recommended. (TOOLS NEWS B075)

End Cutting Edge Geometry

MS plus

Sharp but strong cutting edge enables good surface finishes.

Sharp edges leave a uniform finish.

Conventional

A dull edge leaves an undefined finish.

Seamless Cutting Edge

Radius tolerance R ±196.9 μ-inch.

Micro-grain Cemented Carbide Substrate

Higher wear resistance than conventional products.

MS plus

Conventional

Good surface finishes possible even when simultaneously cutting with end and side edges; for example on drafts of dies and molds.

MP2SDB

Tough carbide substrate with high chipping resistance. Ideal for semi-finishing of forging dies.

Resistance to Chipping

MP2SDB shows excellent chipping resistance even at large depths of cut, high feed rates and long overhang applications.

FOR YOUR SAFETY

- Don't handle inserts and chips without gloves.
- Please machine within the recommended application range and exchange expired tools with new ones in advance of breakage.
- Please use safety covers and wear safety glasses.
- When using compounded cutting oils, please take fire precautions.
- When attaching inserts or spare parts, please use only the correct wrench or driver.
- When using rotating tools, please make a trial run to check run-out, vibration and abnormal sounds etc.
