## ER TOOLHOLDING SYSTEM

## HISTORY

- 1948** Parlec is established in Rochester N.Y. as a job shop specializing in the manufacturing of Sulky Hubs.
- 1973** Parlec begins producing and distributing the Numertap and Autofacer product lines.
- 1977** Parlec expands its product line with the introduction of Toolholders, which are sold as Numertap and Autofacer accessories.
- 1980** The first Parsetter TMM is produced.
- 1985** Parlec builds a new 42,000 square-foot, state-of-the-art manufacturing facility just outside of Rochester in Fairport, N.Y.
- 1992** Parlec begins to manufacture and distribute its own line of Boring Tools.
- 1997** Parlec becomes ISO 9001 certified. Parlec's sales triple from 1992-1997.
- 1998** Parlec further enhances its product line to include Workholding. Construction of a 58,000 square-foot plant addition begins.
- 2003** Parlec enters the Asian market with the opening of a sales and service office in Nanjing China.
- 2004** Parlec acquires Bristol Tool. Driven and static tools are added to Parlec's extensive product line. A new sales, engineering and distribution facility opens in Bristol, England.
- 2006** Parlec continues to expand its world wide footprint by opening a Wholly Owned Foreign Enterprise in Nanjing. This gives the company full sales, engineering, customer support and distribution capabilities on 3 continents.
- 2009** Sales offices are opened in Tianjin, Xian, Wuxi, and Chengdu to expand the China presence.
- 2010** Parlec partners with Gerardi for distribution of Driven & Static Tooling in Europe. Parlec begins distribution of Right angle heads in China.
- 2012** Parlec successfully completes a \$5 million dollar capital investment campaign to automate and expand its manufacturing capabilities in the United States.
- 2014** Parlec partners with TDM Systems

### PARLEC ER SYSTEM FEATURES

## Concentricity = Tool Life

Improve your systems performance and tool life by combining high performance collet chucks and high performance collets. Upgrade today for higher performance and operational cost savings!

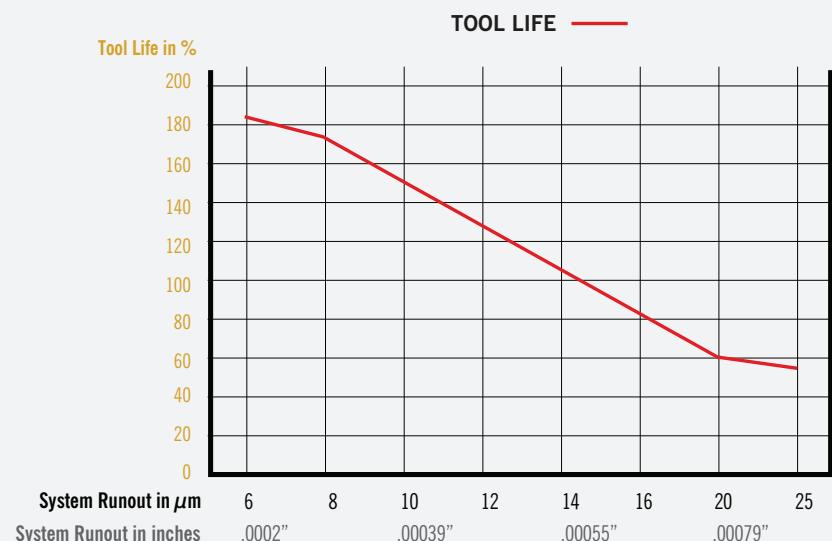

### Technical Features

- Gage tolerance of a Class AA 5 micron collet is .0002" (.005 mm) runout at distance to the ISO 15488 per chart, measured as TIR
- Measured in gage with AT2 taper and maximum 1 micron runout of taper

Collet Diameter	Length at measurement	Class 1	Class 2	Parlec Class AA (5 Micron)
.039 - .063(1-1.6)	.098 (2.5)	.0006 (.015)	.0004 (.010)	.0002 (.005)
.063 - .118(1.6 - 3)	.393 (10)			
.118 - .280 (3 - 7)	.630 (20)			
.280 - .394 (7-10)	.984 (25)

<b>Total Cost</b>	<b>\$560</b>	

### Effects of Runout on the Cutting Edges

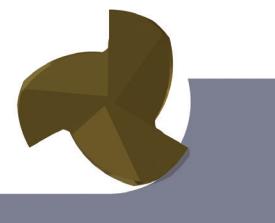

#### Flute 1

High runout flute takes a heavier than planned cut requiring slowing of planned feed.

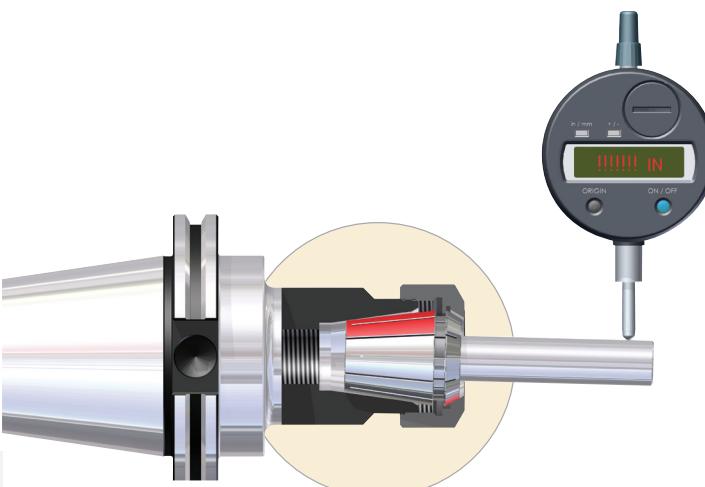

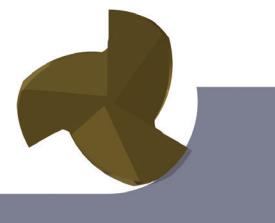

#### Flute 2

Middle runout flute performs as planned.

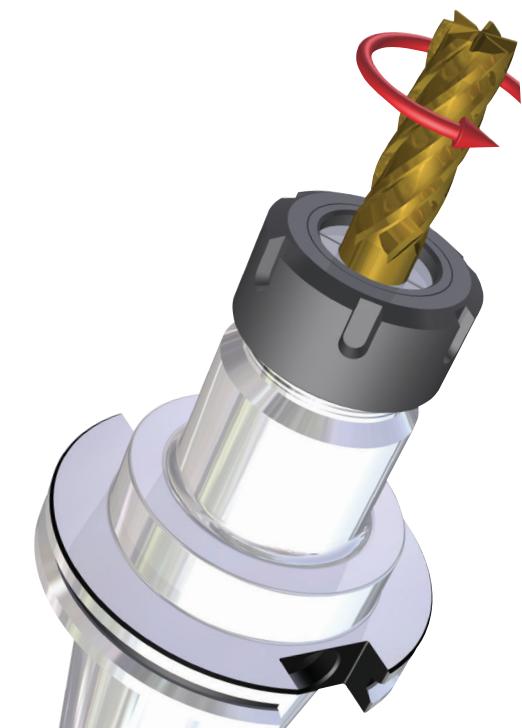

#### Flute 3

Low runout flute does not take enough chip to dissipate heat and wears prematurely.

### Technical Features

Solid nuts can restrict the uniform contact of the top angle of the collet creating uneven clamping. This will create runout in addition to the normal result of the collet seat and collet. Nuts with friction races are designed to increase grip force and decrease angular deflection. Use Collet Chucks with the Parlec Power Nut for best results.

### Other AA Collet Design Features and Benefits

- 12 slots instead of 16 allows for more than enough collapse and increased the area of contact with less tendency to distort.
- All edges are deburred and rounded to promote good interface with the taper of the chuck without the tendency to damage it. This results in more consistent repeatability of the system.
- Collets are polished to eliminate minor blemishes that tend to promote corrosion. Better corrosion resistance will result in longer product life of both the collet and the holder.
- Highly polished OD surfaces reduce the amount of force absorbed by friction between the collet and the collet chuck seat, increasing the grip force on the cutting tool. The inside bore of the collet is intentionally left unpolished to increase the friction between the collet and the cutting tool shank.

The result of an improved AA collet in a quality chuck is increased gripping force, improved rigidity, decreased runout and an overall satisfaction in your collet chuck system.

## PROPER USAGE OF COLLET CHUCK AND BACK UP SCREWS

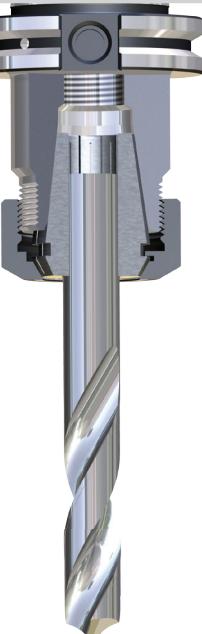

## Proper Positioning

The proper position of tool in relationship to collet is shown here.

The backup screw has been moved to "backup" the cutting tool after it has been torqued to proper specifications.

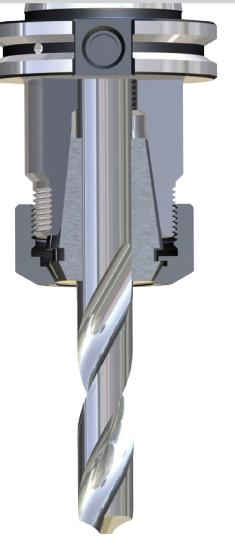

## Improper Positioning

Shown here is an improper position of the tool shank in relation to collet.

Short engagement will result in reduced clamping force, poor concentricity and possible damage to the collet.

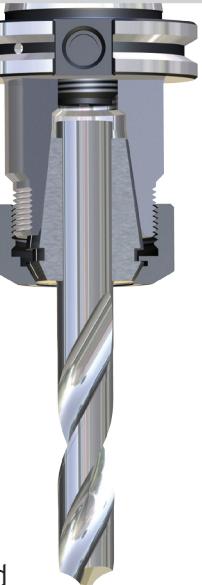

## Improper Positioning

Shown here is an improper position of the tool shank in relation to the collet.

Flutes extending into the collet will result in reduced clamping force, poor concentricity, possible damage to the collet, and poor chip evacuation.

## Improper Positioning

**A tool should be properly positioned and then clamped to proper torque before a backup screw is used.**

Using a screw as a stop screw will result in reduced concentricity and limited grip force.

The proper selection of collet nut and collet type will provide adequate drive force for most machining operations.

## Collet Selection

## ER STANDARD COLLET

(ER Standard Collets see page 27-29)

- For use in ER collet chucks for drilling, reaming, boring, tapping, and milling.
- Meets DIN 6499-B industry standard.
- Collapse range .0393"(1 mm) maximum.
- Size 11 collapse range .020"(1/2 mm) maximum.
- For higher runout tolerance use HIGH CONCENTRICITY AA GRADE 5 MICRON COLLETS

## ER TAP COLLETS

(ER Tap Collets see page 30)

- Designed for use with production ER Tapping tools.
- Provide maximum concentricity with positive driving force.

## ER AA GRADE 5 MICRON COLLET

HIGH CONCENTRICITY >>  
(ER AA Grade 5 Micron Collets see page 31-33)

- Evenly distributed cutting edges for high performance machining.
- .0002" (5 micron) gage tolerance.
- Exceeds DIN requirements.
- Recommended use on size.
- 12 slots, deburred and polished.
- Increased grip force with reduced friction to collet seat.
- Improve system performance and lower cost per piece when used with a quality chuck.
